Trip Circle Business Proposal

Trip Circle Logo

Interpretation of the Trip Circle Logo

The logo of Trip Circle centers on an open ring, symbolizing a complete travel cycle and endless possibilities for encounters. Inside the ring, two abstract human figures in distinct tones lean toward one another, representing leisure travelers seeking emotional healing and business travelers looking for networking opportunities respectively, embodying the brand's core belief that "travel connects people." Paired with a restrained palette of warm brown, sage green and champagne gold, the serif typeface "Trip Circle" exudes elegance and composure, blending laid-back humanistic warmth with professional business sophistication. It conveys the brand philosophy: travel is more than reaching a destination; every journey brings emotional resonance, cultural experiences and fresh opportunities.

I. Project Rationale

Currently, when planning a trip, users have to gather information about food, accommodation, attractions, and activities from multiple platforms. Searching for and filtering through this information takes a great deal of time, creating considerable stress before departure and making spontaneous travel difficult.

Most existing platforms focus primarily on itinerary planning and fail to provide an integrated experience covering the entire travel journey, including the pre-trip, during-trip, and post-trip stages.

-Before the trip: Users have to make separate arrangements for flight bookings, packing lists, and outfits and makeup suitable for different attractions, creating a heavy planning burden.

-During the trip: Ordinary tourists want to explore local customs and traditions in depth and find emotional connections through travel stories. Meanwhile, business travelers hope to connect with like-minded professionals and expand their business networks. Existing platforms struggle to meet both needs.
-After the trip: Organizing photos, editing images, and writing social media captions require additional time and effort.

Therefore, I plan to develop an all-in-one website that covers the entire travel journey. The platform will reduce the stress of travel preparation while addressing users' emotional and spiritual needs as well as their business networking needs.

II. Project Content: An Integrated Three-Stage Travel Experience

1. Before the Trip: All-in-One Planning to Reduce Travel Stress

The platform will integrate information on local food, attractions, activities, and accommodation across multiple cities. Users will be able to book transportation and hotels in one place, automatically generate personalized packing lists, and receive AI-powered outfit and makeup recommendations based on the style of their planned destinations. These features will make travel preparation easier and help users set off with minimal hassle.

2. During the Trip: Tailored Services for Two Types of Travelers (Examples)

A. Cultural and Story-Driven Travelers

The platform will automatically generate in-depth travel routes accompanied by explanations of local customs, traditions, and history. A dedicated travel storytelling section will allow users to connect emotionally with the places they visit and the stories they encounter. Through these stories, travelers can discover reflections of their own experiences and identities in unfamiliar surroundings, fulfilling their emotional and spiritual needs.

B. Business Travelers

The platform will match users with travelers in the same industry who share similar business networking goals. It will also recommend offline activities based on shared interests, helping users expand their professional networks and discover potential business partnerships.

3. After the Trip: Organize and Share Travel Memories in One Click

The platform will automatically categorize photo albums according to the locations users have visited, provide photo-editing suggestions, and generate ready-to-use captions for WeChat Moments and other social media platforms. This will make it easier for users to organize and share their travel experiences.

III. Implementation Plan and Development Process

Phase 1: Foundation and Infrastructure

Build a multi-city travel information database, establish the website's basic framework, and collect destination guides, attraction descriptions, and travel stories.

Phase 2: Core Feature Development

Develop the personalized itinerary recommendation algorithm, the travel storytelling section, and the business traveler matching system.

Phase 3: User Testing

Recruit independent travelers and business travelers for beta testing. Gather feedback and improve recommendation accuracy and content quality.

Phase 4: Official Launch

Launch the website to the public, attract users through online marketing channels, and continuously expand the platform's city-specific resources.

Phase 5: Long-Term Development and Optimization

Introduce additional features, such as audio travel stories and offline local meetups, to expand the platform's services and enhance the overall user experience.

IV. Potential Risks and Mitigation Strategies

Risk 1: Outdated or Inaccurate Travel Information

Mitigation Strategy: Establish a user feedback and error-reporting system, collaborate with local contributors to collect updated information, and conduct regular content reviews.

Risk 2: Low-Quality or Ineffective Business Networking

Mitigation Strategy: Implement detailed verification of user identities and networking goals. Provide industry and interest-based filters, and ensure that users can choose whether to participate in matching rather than being matched automatically or involuntarily.

Risk 3: Copyright Issues and Inconsistent Story Quality

Mitigation Strategy: Introduce a content review process before publication, establish clear copyright agreements for submitted content, and implement content quality guidelines.

Risk 4: A Small Initial User Base and Difficulties in Platform Launch

Mitigation Strategy: Begin with small-scale testing in niche destinations and university student communities. Use emotionally engaging travel stories to attract early adopters and build an initial user base.

V. Vision

Trip Circle aims to be more than just a travel utility website. It seeks to transform the way people experience travel.

Travel should no longer feel like a burdensome planning assignment or be limited to sightseeing and consumption. For some users, it can be a journey of healing, self-reflection, and emotional discovery. For others, it can be an opportunity to build meaningful professional connections and explore business opportunities.

Trip Circle envisions a new way of traveling that brings together emotional fulfillment and practical value, allowing travel to enrich both the mind and real life.

Trip Circle — 75-Second Motion Graphics (MG) Video Script

1. Overall Concept

Project Name: Trip Circle
Video Duration: 75 Seconds
Video Type: Motion Graphics Promotional Video
Core Concept:
Trip Circle is an all-in-one travel service platform that supports users before, during, and after their trips. It addresses the challenges of fragmented travel information and complicated planning by integrating smart preparation, cultural exploration, business networking, and travel memory organization.
Key Content:
Project Rationale: Explain the need for a more integrated travel service that simplifies planning and meets diverse travel needs.
Project Content: Present Trip Circle's services before, during, and after travel, combining cultural experiences with professional networking opportunities.
Implementation Plan: Outline the development process, from building the travel database and core features to user testing, launch, and expansion.
Risk Management: Address potential challenges, including information accuracy, business matching, copyright and content quality, and early user adoption, with practical solutions.
Project Vision: Show how Trip Circle aims to make travel more meaningful by connecting people, cultures, and opportunities.
Core Message:
Trip Circle goes beyond traditional travel planning. It combines emotional and cultural enrichment for leisure travelers with valuable networking opportunities for business travelers, creating a more personalized and fulfilling experience throughout the entire travel journey.

2. Storyboard and Timeline

Scene 1 | 0–12s — Project Rationale
Visuals: A traveler icon appears in the center of the screen. Information cards for restaurants, hotels, attractions, transportation, and packing lists pop up rapidly. The cards overlap and scatter, creating visual clutter.
The screen then separates into three problem modules: complicated preparation, diverse travel needs, and time-consuming post-trip tasks. Finally, all the cards are pulled into an empty circle, preparing for the introduction of Trip Circle.
Voiceover: Travel information is scattered across different platforms. Preparation is complicated, travel needs vary, and organizing memories takes time. Traditional travel planning still leaves room for improvement.
On-screen Text:
SCATTERED INFORMATION
COMPLICATED PREPARATION
FRAGMENTED EXPERIENCE

Scene 2 | 12–29s — Project Content

Visuals: The empty circle transforms into the Trip Circle logo and expands into three connected modules:

-Before the Trip: Destination information, transportation and accommodation bookings, packing lists, and outfit suggestions.

-During the Trip: Cultural routes, location-based stories, business networking, and interest-based activities.

-After the Trip: Location-based photo organization, editing suggestions, and social media captions.

The three modules light up along a circular path, forming a complete travel cycle.

Voiceover: Trip Circle is an all-in-one platform covering the entire travel journey. From smart preparation to cultural exploration and business networking, and finally to memory organization, it offers a more complete and personalized travel experience.

On-screen Text:

BEFORE · DURING · AFTER

ONE PLATFORM, THE WHOLE JOURNEY

Scene 3 | 29–43s — Implementation Plan

Visuals: A horizontal roadmap appears, revealing four stages:

1. Foundation: Multi-city travel database and website framework.

2. Core Development: Personalized route algorithms, travel story modules, and business matching.

3. User Testing: Independent travelers and business travelers test the platform, with feedback flowing back into development.

4. Launch & Expansion: The website launches, and more city markers appear on the map.

The roadmap then extends forward, introducing future improvements such as audio stories and offline events.

Voiceover: The project begins with a travel database and website framework, followed by core feature development and user testing. After refinement, the platform will launch and continue expanding its destinations and services.

On-screen Text:

BUILD → DEVELOP → TEST → LAUNCH → EXPAND

Scene 4 | 43–56s — Risk Management

Visuals: Four risk cards enter the screen one by one. Each initially displays an orange warning icon, which transforms into a green solution icon:

-Outdated or inaccurate information → User feedback, local contributors, and regular verification.

-Low-quality business matching → Identity verification, industry and interest tags, and user-controlled filtering.

-Copyright and content quality → Submission review, copyright agreements, and content guidelines.

-Limited early adoption → Start with niche cities and university communities to build an initial user base.

The four cards then converge into a shield icon, representing risk management and trust.

Voiceover: To address information accuracy, business matching, content copyright, and limited

early adoption, Trip Circle will introduce verification, screening, content review, and small-scale testing to improve service quality and user trust.
On-screen Text:
VERIFY · FILTER · REVIEW · TEST

Scene 5 | 56–75s — Vision
Visuals: All previously featured icons return: a suitcase, cultural stories, connected people, a business handshake, and a photo album. They link together along a circular path, forming a complete visual network.
The circle expands into a route across a city map before converging into the Trip Circle logo, revealing the brand slogan.
Voiceover: Trip Circle is more than a travel tool. It aims to give travel both emotional and practical value. Let culture inspire connection, let connections create opportunities, and make every journey meaningful.
Closing Text:
TRIP CIRCLE
BEYOND THE DESTINATION
MEANINGFUL JOURNEYS. LASTING CONNECTIONS.

Beyond the Destination — 75-Seconds AI Short Film Script

This AI short film is primarily driven by the parallel stories of two protagonists, illustrating Trip Circle's core value through emotional experiences and professional connections. Alongside the narrative, brief visual sequences will introduce the project's development process, user testing, and risk management strategies. In this way, the film will cover the five key aspects of the Trip Circle business proposal—project rationale, project content, implementation plan and process, risks and mitigation strategies, and project vision—while maintaining a cinematic and emotionally engaging storytelling style.

Aspect ratio: 16:9 widescreen
Visual style: Photorealistic cinematic short film, natural lighting, realistic human expressions, shallow depth of field, subtle film grain, warm color grading, professional cinematography.
Female protagonist: A young East Asian woman in her mid-20s, shoulder-length dark hair, understated neutral clothing, natural makeup, thoughtful expression.
Male protagonist: A young East Asian male professional in his early 30s, neat dark hair, smart casual clothing, calm and approachable personality.
Color progression: Cool, desaturated tones at the beginning; gradually transition to warm natural light after discovering Trip Circle; finish with golden morning light.

1. Film Concept

Film Title: Beyond the Destination
Duration: 75 seconds
Format: AI Cinematic Short Film
Visual Style: Realistic cinematic imagery, warm natural lighting, soft color grading
Narrative Style: Dual protagonists, parallel storytelling, emotional progression, hopeful ending

Story Synopsis
The female protagonist is a young woman who has become exhausted by her busy work life. She wants to temporarily escape her routine and rediscover inner peace in an unfamiliar city, but the overwhelming amount of travel preparation leaves her frustrated.
The second protagonist is a young business professional traveling alone for work. He hopes to meet people in his industry during his free time, but struggles to find suitable networking opportunities.
Through Trip Circle, both protagonists discover travel experiences that suit their individual needs.
Following a cultural route recommended by the platform, the woman explores local streets, discovers a story connected to the city, and finds emotional resonance in the experience.
Meanwhile, the business traveler joins an interest-based networking event through the platform, meeting a like-minded professional.
After their journeys, both leave with something valuable: one rediscovers inner peace, while

the other discovers the possibility of a new business collaboration. Trip Circle transforms travel from a stressful planning task or a simple sightseeing checklist into a more meaningful experience.
Core message: One journey, different purposes, and a unique meaning for everyone.

2. 75-Second Storyboard and Script

Scene 1 | 0–12s — Project Rationale
Visual Prompt:
A young East Asian woman sits at her desk late at night, switching between multiple travel websites on her laptop and smartphone. Her desk is cluttered with travel notes, packing lists, and scattered papers. She searches for restaurants, hotels, transportation, and attractions, becoming increasingly overwhelmed. Close-up shots reveal her tired eyes, restless hands, and frustrated expression. Multiple browser windows gradually converge into a simple circular visual motif representing the Trip Circle logo.
Cinematography:
Use overhead shots of the cluttered desk, rapid close-ups of screens and hands, and alternating close-ups of the woman's face. Apply quick cuts, subtle handheld movement, shallow depth of field, and cool, desaturated blue-gray lighting. End with a slow push-in as the visual elements converge into a circle.
Sound Design:
Layer keyboard typing, mouse clicks, smartphone notifications, and paper movement to create a sense of information overload. Use restrained, low electronic ambient music. Gradually reduce the overlapping sounds as the circular motif appears, accompanied by a soft whoosh transition. Keep the voiceover clear and prominent.
Transition:
The overlapping travel windows visually converge into a circle, leading into the Trip Circle interface.
Voiceover: “Travel should be exciting, yet scattered information, complicated preparation, and post-trip tasks often make it stressful.”

Scene 2 | 12–29s — Project Overview
Visual Prompt:
The Trip Circle interface appears on a smartphone, showing destination information, accommodation options, automatic packing lists, and outfit suggestions. The film transitions to the female protagonist exploring a traditional local street, reading a cultural story about the city, and quietly appreciating her surroundings. In parallel, the male protagonist, an East Asian business professional in his early 30s, attends a small industry networking event and engages in a thoughtful conversation with a like-minded professional. Brief shots show travel photographs being organized by location and suggestions for social media captions.
Cinematography:
Begin with clean, stable close-ups of the interface. Transition into smooth tracking shots of the woman walking through the city, followed by intimate close-ups of her reading and reflecting. For the business traveler, use medium shots, over-the-shoulder shots, and natural

two-person compositions. Finish with gentle lateral camera movement across travel photographs. Gradually shift toward warm, natural color grading.
Sound Design:
Introduce a gentle piano melody with subtle strings. Add natural city ambience, footsteps, distant conversations, and soft wind. During the networking scene, use quiet indoor ambience and low conversational murmur. Include understated interface clicks and gentle photo-transition sounds. Keep all environmental sounds below the narration.
Transition:
A travel photograph or location marker leads into a city map, establishing a visual connection to the platform's development process.
Voiceover: “Trip Circle offers an all-in-one service throughout the travel journey. From smart trip preparation to cultural exploration, business networking, and memory organization, every journey becomes easier and more meaningful.”

Scene 3 | 29–43s — Implementation Plan
Visual Prompt:
Begin with a detailed city map and organized travel information displayed on a computer screen. Show a small development team designing the Trip Circle website, reviewing interface layouts, and writing code. Next, independent travelers and business travelers test the platform on their devices while developers observe their interactions and record feedback. The interface gradually becomes more refined. End with several city markers illuminating across a map, symbolizing future expansion into additional destinations.
Cinematography:
Use slow pans across maps and travel data, over-the-shoulder shots of developers working, and close-ups of hands interacting with keyboards and screens. Film user testing with stable medium shots and observational close-ups. Use restrained match cuts to connect planning, development, testing, and future expansion. Maintain natural office lighting and a professional, realistic atmosphere.
Sound Design:
Continue the warm musical theme with a steady, understated rhythmic pulse. Include subtle keyboard typing, mouse clicks, and quiet office ambience. During user testing, add natural conversational sounds and gentle confirmation tones. Use a soft rising musical cue as the city markers illuminate.
Transition:
The illuminated map markers lead into close-ups of verification, user screening, and content review.
Voiceover: “Development begins with a multi-city travel database and website framework, followed by personalized routes, travel stories, and business matching. User testing will refine the platform before launch and expansion into more destinations.”

Scene 4 | 43–56s — Risk Management
Visual Prompt:
Show a team member verifying travel information on a laptop and reviewing corrections submitted by users. Cut to a business traveler selecting industry and interest tags on a profile

interface, illustrating more relevant professional matching. An editor carefully reviews a local cultural story and checks its sources and authorization documents. Finally, a small group of students and early adopters tests the platform, discusses their experiences, and provides feedback. The scene emphasizes practical safeguards, collaboration, and gradual improvement.
Cinematography:
Use controlled close-ups of information verification, hands selecting profile tags, and editors reviewing content. Incorporate over-the-shoulder shots and stable compositions to communicate care and reliability. Move from individual close-ups to a medium shot of the testing group. Avoid exaggerated warning visuals or overly dramatic movements.
Sound Design:
Keep the background music restrained, with a steady rhythm that conveys confidence. Include subtle paper movements, keyboard clicks, and quiet confirmation sounds. Add gentle conversational ambience during the user-testing sequence. Gradually introduce warmer musical tones to prepare for the final scene.
Transition:
The testing group's natural interaction dissolves into the warm morning light of the final scene.
Voiceover: “To address inaccurate information, poor-quality matches, content copyright issues, and limited early adoption, we will use regular verification, user screening, content review, and small-scale community testing.”

Scene 5 | 56–75s — Vision
Visual Prompt:
In golden morning light, the female protagonist walks peacefully through a local city street. She pauses to observe the architecture and everyday life around her, showing a relaxed expression and a renewed sense of inner peace. In parallel, the business traveler continues exchanging ideas with the professional he met earlier, suggesting the possibility of future collaboration without implying that a deal has already been completed. Brief cinematic shots of local streets, travel photographs, and winding roads connect their different experiences. The visual paths gradually converge into a circular composition, followed by the Trip Circle logo and the closing tagline.
Cinematography:
Use slow, stabilized tracking shots and gentle close-ups of the woman's expressions. Apply warm backlighting, soft lens flare, and shallow depth of field. Film the business conversation with natural two-person compositions and subtle over-the-shoulder shots. Gradually slow the camera movement in the final seconds. Use a clean, centered composition for the brand ending.
Sound Design:
Build the musical score into a warm, uplifting climax with piano and soft strings. Retain subtle footsteps, light wind, and natural city ambience. Keep the business conversation quiet and realistic. As the visual paths converge, introduce a gentle rising musical cue followed by a short, warm brand sound. Let the music fade naturally after the closing tagline.
Closing Text:

TRIP CIRCLE
Beyond the Destination.
Meaningful Journeys. Lasting Connections.
Transition:
Fade gently into the final brand screen. Allow enough time for the audience to read the closing text.
Voiceover: “Trip Circle is more than a travel tool. It aims to connect emotional experiences with real-world opportunities. Whether discovering yourself, experiencing local culture, or building new partnerships, every journey can have a deeper meaning.”
